

## Flight of the Bumblebee

Scientists say it cannot be done. It just won't work. The theory of aerodynamics is crystal clear: Bumblebees cannot fly.

The reason, they say, is because the size, weight and shape of the bumblebee's body in relation to the total wing spread make it impossible to fly. The bumblebee is simply too heavy, too wide and too large to fly with wings that small.

Try telling that to the bumblebee. The bumblebee is too ignorant of these scientific facts – or chooses to ignore them – and goes ahead and flies anyway.

You see, it was God Who created the bumblebee and God Who taught it how to fly. The bumblebee obviously did not ask God to explain the problem with aerodynamics. It just flew. It didn't question whether God really knew what He was talking about. It just flew. It didn't wonder if God really loved or cared about it when He gave it such small wings. It just flew

Think about that for a minute...

When God created us, He also equipped us for the life ahead. He knows the plans He has for our lives. Before you were born, God was designing your life, and He was aware that you would be working one day in Life Care, American Lifestyles or Life Care at Home. He prepared you for the role you play.

Because He loves us, He has promised to be with us, to teach us, to carry us, and to be our Rock. There is no need to question Him; all we have to do is trust and obey.

God is not limited by our understanding of how things happen. Just because we cannot see something doesn't mean it is not real. Faith is, indeed, the substance of things not seen. Sometimes life is inexplicable, and the impossible happens. We can't always explain everything.

And just because we don't understand how something can be done doesn't mean God can't do it.
