

The Amazing Honey Bee

Have you ever thought about the remarkable, intricate design of some of the world's tiny creatures? Consider, for example, the honey bee.

That tiny insect organizes a virtual city by building 10,000 cells for honey, 12,000

cells for larvae, and an inner sanctum for the queen. He can also sense a dangerous rise in temperature in the hive and organize the other bees to stand at the entrances and fan their wings to keep the honey cool. In addition, one little honey bee can patrol 20 square miles of a field in its search for flowers.

Think about it: If God has taken such care to build these capabilities into a tiny bee, how much more He has done for us – the crown of creation!

In Psalm 139, David has given us a clear picture of God's hand in the affairs of mankind. Our Heavenly Father is "acquainted with all my ways," said the psalmist. In addition, He knows our every thought. He has placed His protecting restraints around us, and His loving hand is upon us.

As you go through the balance of 2009 and beyond, this knowledge – described by David as "too wonderful for me" – should be a great encouragement and motivator.
