

Your Bank Account

All of us, at one time or another, tend to take time for granted. But the seconds, minutes, hours, days, weeks, months and years are important, because they are measurements of life.

I read an interesting analogy of this subject in *Leadership When the Heat's On*, published by McGraw-Hill, Inc.:

If you had a bank that credited your account each morning with \$86,400, carried over no balance from day to day, allowing you to keep no cash in your account, canceling all unused funds at the end of each day, what would you do?

You have such a bank. It's called time.

Every morning, each person's account is credited with 86,400 seconds. Every night, each second not put toward a good purpose is canceled. Time carries no balance forward. Nor does time allow us to borrow against future allocations.

We can only live on today's deposit and invest our time toward the utmost health, happiness, and success.

How will you invest your time today?
